Coding   🔖 PHP, Java.

Databases   🔖 MySQL, MongoDB.

Web Dev   🔖 HTML, CSS, JavaScript, React, Laravel.

Projects

🔖 **Ecommerce Website**

- Developed a full-featured MERN stack (MongoDB, Express.js, React.js, Node.js) eCommerce web application.
- Integrated user authentication, product listing, cart system.

🔖 **E-governance Website**

- Developed a full-stack e-Government Project Management System using React.js and Node.js with Express for real-time tracking of publicly funded projects.
- Designed and implemented RESTful APIs to manage government projects, including creation, listing, and updates with MongoDB for persistent storage.
- Built secure role-based access controls to differentiate between government authorities and general users.
- Used Tailwind CSS and component-based architecture to build an intuitive and responsive UI.

Projects (continued)

- **HamroMechanics**
  - A cross-platform mobile app that connects customers with mechanics and enables real-time location tracking and service coordination using React Native and Django.
  - Integrated live geolocation features using React Native Maps and WebSocket communication for continuous two-way tracking.
  - Implemented JWT-based authentication with role-based access control (Customer, Mechanic) to secure user sessions and route access.
  - Utilized PostgreSQL for structured data storage and channels/WebSockets in Django for real-time data exchange.
  - Used version control with Git and CI/CD tools to streamline development and deployment processes.
